EDUCATION

BOSTON UNIVERSITY COLLEGE OF ENGINEERING

Bachelor of Science in Computer Engineering

GPA: 3.65, Dean's List

Boston, MA

May 2026

PROFESSIONAL EXPERIENCE

SUPERIOR PACKAGING AND FINISHING

Braintree, MA

Software Developer

May 2024 – Present

- Created multiple online storefronts for clients now used to sell hundreds of unique products.
- Constructed middleware, internal REST APIs, and automation scripts to integrate client storefronts with internal workflows; supervised Azure Virtual Machines hosting these services.
- Developed a Python app using APIs to automate new storefront creation, reducing average setup time from one week to less than a day.

MASS GENERAL BRIGHAM

Somerville, MA

Integration Intern

May 2025 – Jul 2025

- Collaborated with the Software Integration team, handling dozens of API-related requests a week and helping evaluate API selections for internal projects.
- Developed an automated API regression and baseline testing workflow in ReadyAPI and TestEngine, parameterizing test cases from SQL and validating responses; shipped a reusable XML suite.

BOSTON UNIVERSITY ENG IT

Boston, MA

IT Consultant (Systems and Linux)

Feb 2024 – Apr 2024

- Imaged/configured Windows and Linux lab machines; resolved network + IAM issues (DNS/DHCP, 802.1X, VPN, MFA/SSO) and wrote guides that reduced repeat tickets.

PROJECTS

Federated Learning in ChRIS

Sep 2025 – Jan 2026

- Built two Dockerized ChRIS plugins for federated learning in medical imaging: an orchestration plugin and a hospital-site execution plugin.
- Deployed on isolated multi-node setups via a bastion host and reverse SSH; validated end-to-end workflows on the New England Research Cluster while keeping data local.

Stock Tracking Website

Sep 2025 – Dec 2025

- Constructed an event-driven microservice architecture by streaming trades from Finnhub WebSockets, publishing to AWS SQS, and consuming them in an analytics service to power real-time stock metrics.
- Shipped REST APIs with thread-safe in-memory storage, caching, and a metrics/observability endpoint.
- Operationalized stack with CI/CD and a testing suite using GitHub Actions, certifying end-to-end behavior.

Personal Website – Full-Stack Web App (React, FastAPI, PostgreSQL)

Oct 2023 – Present

- Built a full-stack app with JWT auth, password hashing, a REST API for sign-up, email verification, and a normalized schema (users/roles/tokens) with constraints and indexes.

SKILLS

Coding Languages: Python, Java, SQL, C, C++, CSS, HTML, JavaScript, MATLAB, Swift

Frameworks/Tools: React, FastAPI, PostgreSQL, Docker, AWS, GitHub Actions, Linux, Postman
